Abstract

This study investigates the effectiveness of the "Al-Bahits Al-Qur’ani" application in enhancing the study of Qur’anic interpretation. Employing a mixed-method approach, the research combines quantitative data gathered through questionnaires with qualitative insights derived from literature review. The findings indicate that the use of the "Al-Bahits Al-Qur’ani" application significantly improves the efficiency and depth of Qur’anic interpretation studies. Its user-friendly features and search functionalities support better comprehension and access to tafsir resources. This study highlights the growing relevance of digital tools in Islamic scholarship and underscores the necessity for further innovation in the digitalization of Islamic sciences. The results contribute to the discourse on integrating technology in religious studies and provide a basis for future development of similar applications to support Islamic education.

Keywords: *Al-Bahits Al-Qur’ani, Qur’anic interpretation, digital Islamic studies, educational technology, tafsir application.*

Introduction Section

The rapid and rapid development and advancement of technology has given birth to a variety of technological products. These technological products offer many conveniences in various aspects of life such as; economic, social, educational, political, development, and so on. Able to connect people across time and space, technology and the internet have become the center of modern human activity (Ihsan et al., 2025). Humans began to depend on sophistication and technological development in all their affairs, as well as educational affairs. Educational independence and globalization can only be achieved through the use of information and communication technology in the educational process. The use of technology products in the realm of education plays a considerable role in helping the learning process. The learning process is considered to be more effective and efficient with the existence of learning application technology in the world of education. Learning does not always have to involve the classroom as a space for learning delivery. Learning can now be done in any medium, such as school parks, fields, or at their respective homes. One of the solutions that is considered to be able to make learning can be done anywhere and anytime is web-based learning (*e-learning*) (Kustandi et al., 2022).

Technology that has emerged in the digital era is increasingly numerous and can be used in the world of learning. Among the technologies that can be used are *website technology*, AI (*Artificial Intelligence*), IOT (*Internet of Things*), VR (*Virtual Reality*), *Gamification*, *Blockchain*, *Machine Learning*, and so on (Maknun, 2023). Website technology has given birth to various learning applications, e-books, online journals, online libraries and similar software to spread knowledge. This is evidenced by the emergence of various website-based applications, such as online national libraries, maktabah Syamilah, Turaats, science portals, and other online media journals. Applications like these are in great demand because they have an attraction in the form of essentiality, effectiveness and also ease of access and use. This effectiveness is what makes these apps attractive to those who want to be more practical in learning and want to read books more easily without having to spend a percent of money to buy books. Convenience in this digital era is also very much utilized by students, students, and academics. Going to school, campus or office no longer needs to carry a stack of heavy books, subject matter and teaching can be accessed on the internet. Time constraints also often require them to access digital books and certain documents on the internet (Maulida, 2020).

Effectiveness is the adjective form of the word effective that has the meaning of use or succeed and describes something that gives an effect, influence or impression (*Kamus Besar Bahasa Indonesia Edisi Kelima (Big Indonesian Dictionary, Fifth Edition)*, 2016). The word "effective" is a root word that means that a person's actions produce the expected result or the desired outcome. Effectiveness is a factor that shows how far a target (in terms of quantity, quality, and time) has been and is achieved. The more target percentages are achieved, the more effective they will be (Emarda

* Corresponding author: g100231069@student.ums.ac.id

Sari, 2022). Everyone certainly wants all their affairs and needs to be solved effectively and efficiently. Advances in information and communication technology today, the design and development of education systems are very easy and possible. This also applies to learning by utilizing learning applications. The main purpose of using technology in learning is to increase accountability, efficiency, learning transparency, and learning comfort. Thus, a learning technology can be considered effective if it meets certain conditions, such as the ability to influence, change, or produce results. This can be reviewed from how many goals are achieved, the more goals achieved, the more effective the learning technology is (Pujiastutik, 2019).

The Qur'an is one of the main sources of law for Muslims all over the earth. The study of the text of the Qur'an or interpretation of the Qur'an from classical to contemporary times provides breadth in further study. Traditional interpretation has been a scientific endeavor for centuries (Nirwana, 2024). Many works of tafsir have been written and published by previous scholars which later became a reference book in every study of the Qur'an by the generation after him (Fikriyyah, 2016). One of the lessons that must be followed is to teach students how to interpret the Qur'an so that it is not just a program. Acquiring knowledge of the interpretation of the Qur'an serves as a foundation to encourage students to have moral qualities. The purpose of Qur'an Interpretation can be achieved by educators with the support of proper learning management. Interpreting the Qur'an entails reading, preserving, and concentrating on the teachings of the text to provide guidance and knowledge to people around the world (Hidayat et al., 2023).

Along with technological advancements, many interpretations that were once only accessible in print can now be accessed online in the form of online interpretation studies (Afifah et al., 2025). The study of the Qur'an and its interpretation has now entered a new phase with the emergence of various types of digital-based Qur'an studies, including software such as Thematic Tafsir and Scientific Tafsir owned by LPMQ of the Ministry of Religion of the Republic of Indonesia, which is a software package that contains dozens of books and displays a Flash Player that resembles a book (Arifin, 2023). The Ministry of Religion's Qur'an application is considered more practical in promoting innovation and awareness to continue to ground the Qur'an and can help the community (Fitriani et al., 2021). This is despite the fact that modernization and globalization have gone beyond the boundaries of human life and have led to the inevitable consequences that must be faced (Hairul, 2019). This phase is a digitalization phase. Digitalization is an effort to increase the research and scientific capacity of the interpretation of the Qur'an that has been compiled by previous scholars, so that the Qur'an remains alive and can be actualized in a way that is appropriate to the times without damaging its content (Mubarok et al., 2021).

The problem that is often found by Muslims is the lack of information and tools regarding the search for interpretation of the Qur'an in understanding various meanings, laws, wisdom, moral teachings, and other instructions contained in the verses of the Qur'an. The lack of free time in studying the Qur'an is also a mistake caused by the many activities that prevent them from coming to the place of study such as being hampered by work activities, formal school, business activities, and economic factors that prevent a person from buying printed books (Yani et al., 2022). In fact, the results of classical scholars' interpretations are also available in digital form (Rifai, 2020). Similar problems also occur in several universities, so far, students of the Quran and Tafsir study programs are confused to find references to Arabic literature due to the limited availability of libraries, low book reading culture, limited to buy books, and the inability to use Maktabah Syamilah software or similar (Romziana et al., 2022). Therefore, the Muslim community needs new innovations that provide convenience in studying the interpretation of the Qur'an. The presence of various Islamic applications in this digital era will greatly help Muslims in carrying out worship activities, reading the Qur'an, and studying the interpretation of the Qur'an, especially for generation Z (gen Z) who are proficient in technology (Hartawan et al., 2022). The development of interpretation with digital applications also requires thorough and more in-depth research .

One of the applications that is growing and widely used today is the application "Al-Baahits Al-Qur'ani/Quranic Researcher". The application is almost similar to the maktabah syamilah application which is in the form of an online library. However, the application "Al-Baahits Al-Qur'aniy" focuses more on one scientific field, namely the field of Qur'an science and interpretation. This application contains various mushaf with various kinds of qiraat, contains reference books related to the science of the Qur'an and the science of tools such as the book of nahwu, balaghah, various kinds of Arabic dictionaries. The purpose of this research is to find out the level of effectiveness of the use of these applications in the study of sharia science, more specifically in the study of the Qur'an and Tafsir for those who are deep in this science.

Methodology

This research method uses a quantitative approach. In collecting data, the author used a questionnaire in the form of a google form as an online survey research method by sharing the google form link to the research subjects through social media. The steps are as follows; 1) collection of resources through questionnaire techniques; 2) reduce data with the aim of simplifying and categorizing data; 3) presenting data in the form of average descriptions; and 4) draw conclusions.

The writing of this article also uses the literature review method, which is the process by which researchers place, obtain, read, and evaluate research literature related to the problem to be researched. In this study, the researcher analyzed the effectiveness of the use of the application "Al-Baahits Al-Qur'aniy" in the study of the interpretation of the Qur'an. In the early stages of searching for journal articles, the articles used were related to "the use of the application of interpretation of the Qur'an as a learning medium", "the effectiveness of the use of the application of interpretation", and "the study

technology of interpretation of the Qur'an". The literature review conducted was sourced from Google Scholar and printed books.

Results and Discussions

a. About Al-Bahits Al-Qur'ani App

Over time, online systems began to be widely used in many ways. One of them is to help students or students learn and access knowledge. One of the benefits of this technological advancement is that the Qur'an and digital Tafsir can be accessed anytime and anywhere (Rohmawaty et al., 2023). One of the technological media that can be used in studying the Qur'an and interpretation is the Qur'an search application/software. The software "Al-Bahits Al-Qur'aniy" is a *quranic researcher application* that contains the Qur'an (mushaf) with various kinds of qiraat and Qur'anic knowledge; either the science of tafsir itself or the science of tools. This application was created by an Islamic-based application company called *Nuqayah* or commonly known as *the Nuqayah community*. This Nuqayah company also has other learning application products, such as "At-Tafsir At-Tafa'uliy" an application that presents the study of the book of tafsir in audio form, until now there are eight books of tafsir that are presented and can be listened to anywhere and anytime, "Al-Bahits Al-Haditsy" application that provides various hadith books and hadith science, "Al-Muqri" an audio-based Qur'an application designed to make it easier to memorize the Qur'an, "Turaats" is an online library application that provides many scientific books and reading books in various fields of Islamic science.

The purpose of this application is to facilitate the learning and understanding of the Qur'an and to provide all the needs of researchers and people who understand the verses and meanings of the Qur'an. This *quranic researcher* application began to be widely used around 2016. One of the advantages of this application is that it can be accessed and even downloaded by android, iOS, and computer users. The way to get this application users can download it through the playstore, AppStore, or access it through the old website. This is certainly one of the attractions for gadget users who want to be more practical in learning the Qur'an and the knowledge of the Qur'an. Not a few of the leading scholars who use this application, including Shaykh Shalih Al-Munjid -*hafidzahullahu*- a scholar from Saudi Arabia, he said "Congratulations to the students and lovers of the interpretation of the Qur'an with the great work of the al-Bahits al-Qur'ani application, you can find the interpretation of a verse from 40 references". Apart from him, there are many other scholars who use this application. With this application, more and more gadget users can access interpretation books easily.

b. Features and Facilities of Al-Bahits Al-Qur'ani Application

The application "Al-Bahits Al-Qur'aniy" has similarities with the application that is quite well known among scholars, namely "Maktabah Syamilah", both of which are in the form of an online library in Arabic and contain reference books in the field of Islam. However, there are several things that distinguish between the two, namely in terms of scientific focus. The "Al-Bahits Al-Qur'aniy" application can be said to be more focused on the field of the Qur'an and the Science of the Qur'an, including the interpretation of the Qur'an, while the "Maktabah Syamilah" application is a library of Arabic books that is much more complete in providing a variety of books from various fields of Islamic science. This makes the "Maktabah Syamilah" application more appropriate to download on a laptop or computer because it requires a large enough storage memory and is difficult to access through a mobile phone, in contrast to "Al-Bahits Al-Qur'aniy" which can be accessed both on mobile phones and computers.

The display of the "Al-Bahits Al-Qur'ani" application on mobile phones is no different from the display on a computer as shown in figure 1. The "Al-Bahits Al-Qur'ani" application contains 40 references to the book of tafsir which are grouped based on their categories, such as master tafsir, contemporary tafsir, tafsir that has a balaghah pattern, general tafsir, and tafsir that focuses on the beauty of the arrangement of sentences or expressions (*'ibarah*). The scholars arrange the rules that limit them in such a way as well as provide signs and provisions in order to understand these verses. The rules of *tasyri'iyah*, the rules of *lughâwiyah*, the rules of *'aqaïdiyyah* and so on. In addition to determining these rules, differences in interpretation are also influenced by the background of the mufasir's life and his scientific concentration (Azizah et al., 2022). There are also 30 books related to the knowledge of the Qur'an. The books of Qur'an sciences are grouped into several groups, such as *the book of i'rab al-Qur'an*, the book of *ahkam al-Qur'an*, the books of *ma'ani al-Qur'an*, and the book of *asbabun nuzul*. Grouping by category makes it easier for users and makes the app look neater and more attractive. In this application, there are also various kinds of mushaf based on qiraat (how to read) and its writing (*rasm*). Users of this application will also be facilitated with a number of Arabic dictionaries, both Arabic master dictionaries and vocabulary dictionaries in the Qur'an. In the upper center there is a white square column which is a search feature (*bahts*). This search feature makes it easier for users to find the interpretation of a verse, its meaning, *i'rab*, and *the study of the law contained in the verse*. Users simply write a piece of Qur'an verse in the search field then they will be presented with various interpretations and various information (*ma'lumat*) of the verse or by writing a word contained in the Qur'an, the meaning will appear.

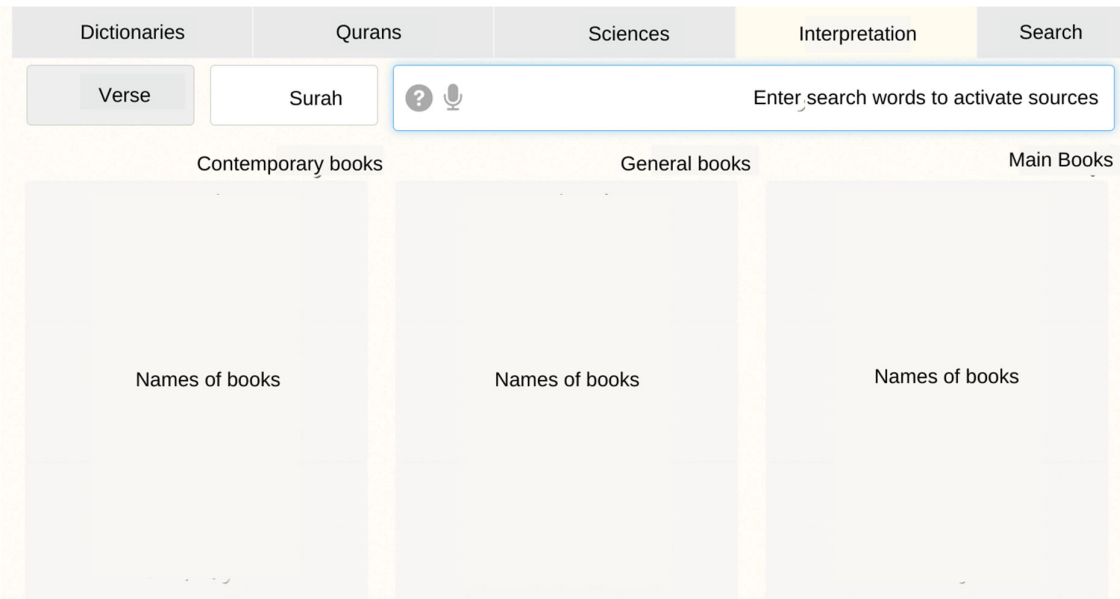

Figure 1. Display of apps on your computer

c. Respondent Opinion Data Regarding the Effectiveness of the Application of Al-Bahits Al-Qur'ani in the Study of Qur'an Tafsir

The data of this research is from 14 respondents who are students and alumni of LIPIA Jakarta sharia study program (*qism*) who also study the science of Qur'an interpretation. Some of them are already familiar and familiar with this application, even so, some students have not used this application as a reference source. The author collected data on the effectiveness of using this application by distributing questionnaires to students who have downloaded the application and using it as a reference source for reading and assignments. Of the 14 correspondents who answered the questionnaire, 71.4% of them stated that this application was very effective in learning the science of interpretation, while as many as 28.6% stated that this application was quite effective. The effectiveness is influenced by several aspects, such as ease of access, beautiful appearance, easy-to-read fonts, availability of references, ease of use, completeness of features, and provision of understanding. The diagram depicting the number can be seen in figure 2:

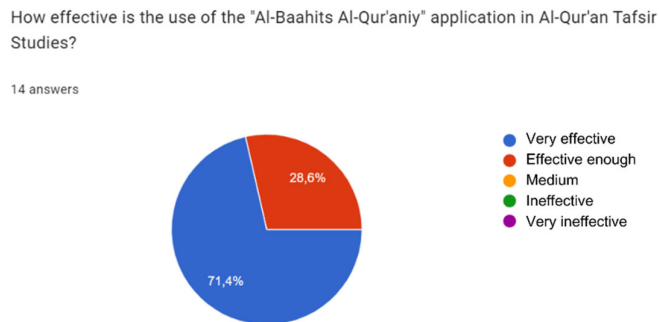

Figure 2. Respondents' opinion data on the effectiveness of application use

In what aspect is the effectiveness of the "Al-Bahits Al-Qur'aniy" application?

14 answers

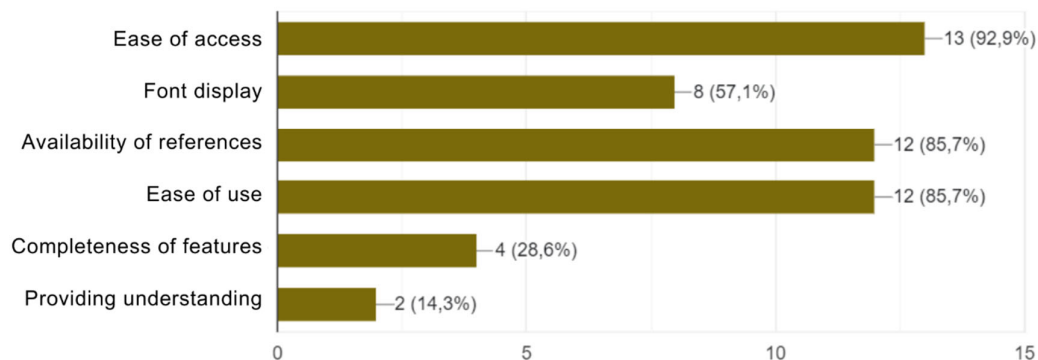

Figure 3. Factors that affect the effectiveness of application use

The two images above prove that the use of *the quranic researcher application* is very much needed for students who study the science of interpretation. They believe in the effectiveness of this application. Because according to them, ease of access, ease of use, and availability of references support the efficiency and effectiveness of learning. The respondents of this study also mentioned other advantages of this application. "Al-Bahits Al-Qur'aniy" is considered structural and neater compared to other applications, this can be seen from the grouping of books of tafsir and books of Qur'anic knowledge. With this grouping, the search for the interpretation of a verse can be obtained quickly according to what the user wants. In addition, the appearance and fonts in this application are somewhat more attractive than other applications. What is no less interesting is that the use of this application does not charge a penny. All books, features, and services available in this application can be accessed easily and for free. In addition, the research subjects also mentioned several shortcomings of this application. The absence of the 'change language' feature makes this application only suitable for users who understand and understand Arabic. Users of this app must also be connected to the internet, without the internet network this app cannot be used. In the tafsir section, there is no 'find' feature that makes it easier for users to find a word from a certain book of tafsir. In addition, there is also no page number of the book which if there is one will make it easier for users to make *footnotes* when writing scientific papers. However, the results of the questionnaire distributed to the subjects show that this application is very effective in being used as a tool and support in the study of Qur'anic interpretation.

d. Advantages of Al-Bahits Al-Qur'ani Application

Keep in mind that the advancement of learning technology, until any time it will definitely have advantages and disadvantages (Novita et al., 2020). The "Al-Bahits Al-Qur'ani" application has several advantages that are attractive to its users, here are the advantages of the application based on the results of a survey through a questionnaire distributed to respondents:

- 1) Ease of access and use. The "Al-Bahits Al-Qur'ani" application is website-based, so it can be accessed through search websites such as *google chrome*, *firefox*, *microsoft edge*, and others. In addition, this application can also be accessed through android, iOS and Microsoft systems, so it can be downloaded through the appstore and playstore. So that way, all smartphone and computer users can access and use this application easily.
- 2) Fast app response. One of the advantages of this application is that it has speed in interacting and responding to user requests, this is because this application is not too heavy and is connected to the internet.
- 3) The application "Al-Bahits Al-Qur'ani" is free and more economical, this advantage is the biggest attraction for students, because this application is felt to be able to replace libraries and bookstores in terms of efficiency and practicality.
- 4) The "Al-Bahits Al-Qur'ani" application provides complete features, such as the verse search feature by simply writing a piece of verse or sentence in the Qur'an, then it will appear in front of the user of the related verses. In addition, the existing text writing, both Qur'an texts and interpretations, can be copied, making it easier for users

among students to do assignments and write. Another feature that is no less interesting is the feature to enable and *disable (on-off) punctuation (harakat/tasykil)*.

- 5) The design and appearance are quite attractive, the "Al-Bahits Al-Qur'ani" application uses a different writing style (*font*) between the font of the Qur'an verse and the tafsir font so that it is easier for users to distinguish between verses and tafsir and readers do not get tired easily.
- 6) Adequate availability of references accompanied by their classification. Based on the statements of several respondents, the application "Al-Bahits Al-Qur'ani" is a complete online tafsir library because it contains many references from the most concise levels to the levels of volumes of books, from the main tafsir book to contemporary tafsir books.
- 7) The application file size is relatively small, so to download this application your phone or computer does not require a lot of storage memory and internet quota. This is certainly a consideration for users, especially among students.

e. *Disadvantages of Al-Bahits Al-Qur'ani App*

The shortcomings of this application based on the statement of the respondent are as follows:

- 1) The "Al-bahits Al-Qur'ani" application only provides Arabic and there is no translation feature from Arabic to other foreign languages, so this application will be difficult to use and enjoy for those who do not understand and understand Arabic.
- 2) The use of this application is still highly dependent on the internet network, so users must always be connected to the internet, because this application is website-based and there is no book download feature.

Conclusion

The above explanation shows that today's technological progress has reached its peak, humans have always depended on technological sophistication and felt easy in everything. Technology helps humans access the various horizons of the world, as scientific advances do. The effectiveness of the use of technology in the field of education is undoubted by its users. Until now, science is in line with various existing technological developments, as evidenced by the existence of a lot of applications, software, e-books, online libraries, and journals to spread science. One of them is the "Al-Bahits Al-Qur'ani" application. This application contains 40 books of tafsir, 30 books related to the sciences of the Qur'an, 9 Arabic dictionaries, and various mushaf based on qiraat and its writing (*rasm*).

An application must have several advantages that are attractive to gadget users. One of the advantages of the "Al-Bahits Al-Qur'anish" application is the ease of access, this application can be downloaded by android, iOS, and computer-based devices without charging. In addition, the writing model (*font*), appearance and availability of books along with their structured grouping are also more valuable compared to other applications. Because, it makes it easier for users to read and does not make readers feel bored quickly. But besides that, this application also has a drawback, namely that users of this application must always be connected to the internet, without an internet network users will have difficulty using this application. In addition, this application until now only provides Arabic as the language of the application, so it will be a little difficult to use and enjoy for those who have not learned Arabic. However, overall this application is very helpful and learning the interpretation of the Qur'an is more effective and efficient with this application.
